

Note for Excel 2016 (and possibly) Excel 2013 users...

Dragging the Resampling_Stats.xla file into an open workbook or double-clicking the Resampling Stats add-in may not install the entire menu system.

The best method for opening and working with Resampling Stats would be:

- 1) Start Excel
- 2) Use File > Open to navigate to the Resampling Stats folder and select the Resampling_Stats.xla file
- 3) Once you open the Resampling Stats file, you should be able to find the Resampling menu and toolbar in the Add-ins workbook menu.
